Curator’s Corner

*Dear Friends of the Vallarta Botanical Garden,*

This April we celebrate Easter, usher in springtime, and rejoice in a list of incredible events at the Garden. Even though we announced it last month, it bears repeating that Delta Airlines listed the Vallarta Botanical Garden as their first recommended destination in their 2018 Caribbean, Mexico and Latin America Guide describing it as “truly mesmerizing.”

In the month when we celebrate springtime we have articles for you on both the *birds* (pages 10 & 11) and the *bees* (pages 6 & 7). Last month we also had a very important survey of our newly acquired conservation preserve by an exceptionally talented group of national and international botanists (see more on pages 2-5).

Those of us who conserve and study nature are continually rewarded by a never-ending string of miraculous surprises. Once such recent surprise for me was to find a tiny marsupial mouse cowering in an elven nest while I was out gardening. This fragile and helpless looking creature reminded me of the infinite lives we touch every time we protect even a small parcel of nature.

*Warmest regards from the Garden,*

*Bob Price, Founder and Curator, VBG*
Advancing Plant Science at the Vallarta Botanical Garden

By Scott McMahan, Member of the Vallarta Botanical Garden’s Science Advisory Board and Manager of International Plant Exploration, Atlanta Botanical Garden

This March, the Vallarta Botanical Garden’s Science Advisory Board gathered in Puerto Vallarta, not just to convene their annual meeting, but to also collaborate in field research. After reviewing many of the Garden’s amazing accomplishments this past year, participants began a floristic survey of the VBG’s recently acquired conservation preserve land (first announced in the June 2017 edition of The Leaflet).

Our group consisted of VBG staff and representatives from multiple botanical gardens throughout the US as well as researchers from the Universidad de Guadalajara (Instituto de Botánica and Centro Universitario de la Costa). We split into teams to cover as much ground as possible including a large parcel across the Los Horcones River and another across the Highway 200. Over the next several days we bushwhacked our way all along the river, up the ridges, and along the Garden’s new property line. While exploring the forest, we meticulously documented our observations and collected herbarium specimens that are currently being identified and tallied by our friends as the University of Guadalajara. Not only did we note great diversity in the tree canopy, we also found a thriving community of epiphytes including many species of Bromeliads (especially Tillandsias) and Orchids. Great effort has been made on the part of the VBG to construct a fence completely surrounding the property to protect the existing forest from grazing animals and help deter would-be poachers.

The topography of this new land acquisition is quite steep and rocky making it somewhat difficult to access. However, with a little work, creating some new nature trails that could branch from the existing Jaguar trail as well as a ridge trail across the river are certainly possible. With all of the beautiful natural river pools that will soon be accessible upriver and the healthy forest surrounding (and now owned by) the VBG, the future of this little jewel in western Mexico has just become much brighter.

Beekeeping Comes to the Vallarta Botanical Garden

Much of the beauty that we enjoy at the Vallarta Botanical Garden is made possible by the help of our pollinators. Around the world, honeybees are the single most prolific pollinator and are essential for maintaining crops we rely upon for feeding the planet. Much attention has been drawn upon honeybees in recent years due to concerns over a phenomenon known as colony collapse disorder. These hard-working, hive-building, honey makers are no longer taken for granted.

Vallarta Botanical Garden volunteer David Erne has been a hobbyist beekeeper for over thirty years and has worked with beekeepers throughout much of North America and Europe. He recently sponsored the installation of two honeybee hives in the Garden. VBG volunteer and local beekeeper Talit María José León Mantecón helped him source and purchase the necessary bees and equipment. The two of them then worked with Emmanuel Pina Bernal and Luis Ángel Juárez González to install the hives on the slope of one of the Garden’s highest hilltops.

These bees should complement the work of other bees naturally occurring within the Garden and form a pollination super team! The new hives are located far enough from publicly accessible areas that they are not a concern to those who stay on proper lawns, trails, and pathways. If you have any questions about the new buzz, please find David or another of the Garden’s volunteers to hear the latest updates on the hives. David and Talit are happy to train others in the gentle art of beekeeping. You may request their contact information from Michaela Flores at the Garden’s Membership Desk.
“...for so work the honeybees, creatures that by a rule in nature teach the act of order to a peopled kingdom...”

2018 Vallarta Bird Festival
*Article and Photos by Nancy Holland*

Last month’s 2018 Vallarta Bird and Nature Festival hosted by the Vallarta Botanical Garden was another huge success! The Garden was the main hub of activities and each morning sold-out guided birding tours radiated out from there with each enthusiastic participant observing an average of 60 to 70 different species of birds per day! Afternoons activities included presentations, a photo exhibit, and a closing folkloric dance performance involving audience participation.

Luis Morales of the *San Pancho Bird Observatory* provided a wonderful educational presentation to raise awareness of illegal trafficking of parrots. Jorge Novoa of *El Santuario de las Guacamayas*, gave a presentation about the nest box sponsorship program, a short history about the macaw sanctuary, and how a nest box is built and installed—no minor task! Each day, Rohini Velasco of *CEMBAB* brought two beautiful rescued Military Macaws for participants to interact with and learn from. He also provided an informative discussion about ongoing studies of parrot behavior. Eduardo Lugo, of *CMFN*, presented a new book filled with gorgeous nature photography and information about the work of Mexican photographers/conservationists.

The festival also saw a bird photo exhibit featuring the work of Petr Myska, Frank McCann, as well as a few of my own prints. Both the Vallarta Botanical Garden and the Vallarta Bird and Nature Festival thank all of the generous volunteers who made this event possible. We’re now brainstorming and planning for next year to make the 2019 festival even better, so please contact me if you would like to get involved!

*Vallarta Birders*
*Vallarta Botanical Gardens AC*
Of all the natural sounds to be experienced in the Vallarta region, perhaps the Great Kiskadee (last month’s “Mexican Bird of the Month”) and the diminutive Ferruginous Pygmy-Owl are the most distinctive and familiar to local human residents—okay, Great-tailed Grackles notwithstanding—even if the source of the latter’s repetitive vocals remains a mystery to the vast majority who hear it.

Why they are called “pygmy-owls” is pretty obvious once you catch sight of this bird; they are about the size of a human fist. However, the name ferruginous is less familiar to the general public, but makes perfect sense when you learn that it alludes to the compound Ferric Oxide, a reference to the bird’s russet plumage, which to some observers bears a similarity to the compound commonly known as rust—$\text{Fe}_2\text{O}_3$… though not all individuals are all that, well, “rusty.” In fact, these owls may be gray, earth toned or russet in color depending on each individual’s plumage variation.

Either way, the aforementioned vocals of this owl are pretty unusual, as well, both because they utter them nearly continuously during daylight hours, and because they may repeat them as many as 130 times in a minute, often going for more than one hundred repetitions without rest. Now that’s saying something! As hard as it may be to believe, however, that is not even close to the record number of vocals owls can belt out in a minute. That distinction goes to this bird’s close relative, the Peruvian Pygmy-Owl ($\text{Glaucidium peruanum}$) of the Atacama Desert, which calls nearly twice as fast!

In the Puerto Vallarta region, and most of the American tropics for that matter, Ferruginous Pygmy-Owls are common residents of warm, lowland environments; in fact, in the far north of their range they occupy plant associations dominated by Saguaro cacti in the Sonoran Desert, but occur more typically in thorn forest, riparian stands along rivers, and even within ranchos and home gardens in our region.

Two relatives, the endemic Colima Pygmy-Owl and Northern (Mountain) Pygmy-Owl, also occur in our region, but mostly segregate out by altitude, with the Colima Pygmy-Owl dominating in oak forests of the
middle elevations (above 1100 m), and the Northern Pygmy-Owl—known locally as the “Mountain Pygmy-Owl”—replacing the former at the highest altitudes above 2000 m, which are dominated by pine-oak (encinal) and coniferous environments of pines and firs. However, both Ferruginous and Colima pygmies are common and sympatric at Vallarta Botanic Garden!

Studies have revealed that these small owls are succinct predators of insects (particularly grasshoppers and cicadas), arachnids (including venomous spiders and scorpions), reptiles (lizards), some mammals (mice) and small—and not so small—birds, ranging from warblers to quail. Perhaps the most important item in their diet is grasshoppers. Being a small predator has both advantages and disadvantages. The advantage must be stealth. However, being smaller than other local owls, all pygmy-owls have “false eye-spots” on the back of their heads (see inset), two black spots that are theorized to dissuade larger predatory birds—including other owls like Mottled and Great Horned owls—from depredating them!

Nesting occurs in tree or cacti cavities, originally excavated by woodpeckers such as the Golden-cheeked, Lineated and Pale-billed varieties. Sometimes the owls drive the woodpeckers from their hard-earned homes after construction, though most move in once the original owners have moved out.

Though they are one of the most widespread American owls—occurring from Arizona to Argentina—the Ferruginous Pygmy-Owl population consists of several distinct races. The North American population is sometimes considered distinct from their relatives in South America, being called the “Ridgeway’s Pygmy-Owl” or *Glaucidium ridgewayi*.

Some North American races are now considered threatened north of Mexico, where they occur in the US States of Arizona and Texas. The Arizona population—known as the “Cactus Pygmy-Owl” is now so rare that just 20 or so birds are thought to remain north of the border, with an unknown population in adjacent Sonora, Mexico; the Sonora population has declined by 30% in recent years, which is troubling. In Texas they now reside primarily on large private ranches—such as the King Ranch—in far south Texas, and the population hovers around 2100 individuals. All three populations are threatened by the infamous border wall, now under construction!
**Vallarta Botanical Garden**

**Pet Cemetery**

---

**$200 USD**

**Simple Burial (No Marker)**
Burial in a place chosen by Garden management and a record of burial location. NO MEMORIAL STONE. Includes 1 a year Individual Membership to the Garden.

---

**$600 USD**

**Bridge of Dreams Slope**
Burial and memorial stone in a private part of pet cemetery and record of the burial location. Includes a 1 year Sustaining Membership to the Garden.

---

**$1000 USD**

**Chapel Valley Slope**
Burial and memorial stone on the hillside of the pet cemetery visible from the Peace Garden and a record of the burial location. Includes a 1 year Sustaining Membership to the Garden.

All memorial stones in the Pet Cemetery are made of Cantera and a personalized message will be presented on a 30x30 hand painted tile.

---

For more information, please contact Michaela Flores at: memberships@vbgardens.org
**We Cater Events!**

...with many beautiful settings for your special day

*Why not have your special event in one of the most beautiful places in the world? There are many sites around the garden to set the stage for your fabulous event! From a simple wedding with just a few friends, to a lavish party with all the trimmings.*

---

**Become a Garden “GEM” by Giving Every Month**

Dividing your contributions to the Vallarta Botanical Garden into monthly payments can help you better budget your annual giving while providing us with a dependable monthly income to carry the Garden through the slower times of the year. Learn more about this valuable opportunity by visiting the new Give Every Month “GEM” page on the Garden’s website, [www.vbgardens.org](http://www.vbgardens.org) and begin this kind of contribution today.

**Commemorative Cantera Benches**

Would you like to honor or memorialize someone with a permanent cantera bench at the Vallarta Botanical Garden? Benches are finished with beautiful hand-painted ceramic tiles. We can help you create a custom design with text and images of your choice. Prices are at $7,000 USD for a Banca Real (Regal Bench) and $5,000 USD for a Banca Distintiva (Distinctive Bench). Dividing this amount into payments over the course of three years results in a commitment of only $194 or $139 USD per month. These gifts, along with other honorary/memorial gifts such as individual tiles and permanent memorial stones in the Garden of Memories, qualify for tax-deductible contributions in Mexico, the US, and Canada. For more information, please visit our website or call 322 223 6182 and ask to speak to the Garden’s Membership Coordinator, Michaela Flores.

**Your Legacy Lives on at the VBG**

Including the Vallarta Botanical Garden in your wills, trusts, and estate planning is an investment in the long-term viability of this important natural sanctuary for Puerto Vallarta and the exquisite flora of Mexico and world tropics. A member of the Garden’s Legacy Committee would be happy to talk to you about the best options for optimizing your philanthropic potential and further blessing a community. Please write to [info@vbgardens.org](mailto:info@vbgardens.org).
Mexican Orchid of the Month

*Prosthechea chacaoensis* (Rchb.f.) W.E.Higgins

Article & photo by Centeotl Aragón, Staff Biologist

The common name of this highly recognizable orchid is “cockleshell” due to its distinctive form and the coloration of its labellum. The scientific genus name comes from the Greek word “prostheke” meaning “appendix” and is a reference to this flower’s column. Its species name refers to the Chacao region of Venezuela, but it has a wide distribution ranging all the way up from South America into Mexico. At the time of its first description by Heinrich Gustav Reichenbach in 1854, the leading orchid taxonomist of that era, it was originally referred to as *Epidendrum chacaoensis*. Its genus has since gone through subsequent name changes from *Epidendrum*, to *Encyclia*, and now *Prosthechea*. Despite its similarities to *P. baculus*, *P. fragrans*, *P. ionophlebia*, *P. radiata*, and *P. trula*, among many others, it can differentiated by its two apical leaves, gray-green subcylindric to ovoid pseudobulbs, a racemose inflorescence with two to eight flowers and a bloom period of midwinter to early summer. It has very fragrant flowers which many visitors say reminds them of jasmine. So on your next visit here let yourself be captivated by its fragrance!

REFERENCE:

- Pupulin F. and Karremans. 2007. *Prosthechea ionophlebia* and *Prosthechea chacaoensis*; two different species, but which is which?. Lindleyana in Orchids 76(3): 202–208.
Education and Volunteer Report  
By Centeotl Aragón, Vallarta Botanical Garden

The first group of students we received this past month are future nutritionists studying at the Universidad de Guadalajara’s local Centro Universitario de la Costa (UDG CUC). Their teacher, Blanca Denisse, worked with me to focus on a custom-tailored learning experience to teach students about the health benefits of growing a home garden. Later in the month we also had an additional group of visiting students from the CUC led by David Bustos and a group from Mexico City’s Great Union Institute whose visit was coordinated by Yolanda Rosique.

From the Membership Desk

The beauty of the Vallarta Botanical Garden makes it a perfect backdrop for celebrating the life of a loved one and/or a cherished pet. The hillsides on either side of the International Peace Garden of Mexico in front of Our Lady of the Garden Chapel are two especially appropriate places to do so. Pages 12 and 13 of this month’s edition of The Leaflet have more information, but I would also be happy to talk with you about this further should you be interested in creating a memorial here at the Garden.

Members: Please always wear your membership card while visiting the Garden. This helps our staff and volunteers recognize you as members and offer valuable discounts on your Garden purchases and other important benefits.

Can you find your name on our Wall of Patrons?

If you’re not yet “on the wall” we invite you to join the family that preserves the Garden forever!

Becoming a member is easy & provides great benefits:
